2  <html>
3  <head>
4      <title>My AWS Static Website</title>
5      <link rel="stylesheet" href="style.css">
6  </head>
7  <body>
8      <h1>Welcome to My Static Website!</h1>
9      <p>Hosted on Amazon S3 and CloudFront.</p>
10
11     <button onclick="changeText()">Click Me</button>
12
13     <p id="demo"></p>
14
15     <script src="script.js"></script>
16 </body>
17 </html>
```

```
<> index.html # style.css X JS script.js
# style.css > button
1  body{
2      font-family: Arial;
3      text-align:center;
4      margin-top:100px;
5      background: ■ #f2f2f2;
6  }
7
8  button{
9      padding:10px 20px;
10     font-size:18px;
11 }
```

```
index.html X # style.css JS script.js X
JS script.js > changeText
1 function changeText(){
2   document.getElementById("demo").innerHTML="Website Successfully
3 }
```

Step-2: login to s3

Account Regional namespace (recommended)
General purpose buckets created in your account Regional namespace are

Bucket name [Info](#)

my-static-website-soham

Bucket names must be 3 to 63 characters and unique within the global namespace. [more](#)

Copy settings from existing bucket - optional
Only the bucket settings in the following configuration are copied.

[Choose bucket](#)

Format: s3://bucket/prefix

Block Public Access settings for this bucket

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access. When applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to this bucket, customize the individual settings below to suit your specific storage use cases. [Learn more](#)

- ☐ **Block all public access**
Turning this setting on is the same as turning on all four settings below. Each of the following settings are independent of one another.
- ☐ **Block public access to buckets and objects granted through *new* access control lists (ACLs)**
S3 will block public access permissions applied to newly added buckets or objects, and prevent the creation of new public access ACLs for existing buckets and objects. This setting doesn't change any existing permissions that allow public access to S3 resources using ACLs.
 - ☐ **Block public access to buckets and objects granted through *any* access control lists (ACLs)**
S3 will ignore all ACLs that grant public access to buckets and objects.
 - ☐ **Block public access to buckets and objects granted through *new* public bucket or access point policies**
S3 will block new bucket and access point policies that grant public access to buckets and objects. This setting doesn't change any existing policies that allow public access to buckets and objects.
 - ☐ **Block public and cross-account access to buckets and objects through *any* public bucket or access point policies**
S3 will ignore public and cross-account access for buckets or access points with policies that grant public access to buckets and objects.

Bucket policy

EditDelete

The bucket policy, written in JSON, provides access to the objects stored in the bucket. Bucket policies don't apply to objects owned by other accounts. [Learn more](#)
